G002 40

A full-page background image showing two skiers from behind as they ascend a steep, snow-covered mountain slope. The skier on the left is wearing a blue jacket and black pants, while the skier on the right is wearing a red jacket and black pants. Both are carrying skis and poles. The sky is a clear, pale blue, and the snow is bright white with some shadows.

We are a group of friends, all from the mountain town of Åre in northern Sweden, who share a passion for an outdoors lifestyle.

Our weather changes as fast as a blink of an eye from extreme arctic sunlight to deep winter darkness, from heavy snow fall to fog and stormy rain. But hell, that doesn't stop us; it's part of the charm!

Our products are honest and straight forward in design, have a great fit and come in a range of awesome colors, but most of all, have an uncompromising quality that provides you with the highest level of reliable functionality.

We believe, that if you are like us, you enjoy the excitement and wonders of the outdoors, you want to experience new and exciting things and you would love nothing better than to share your adventures and experiences with your friends.

We brought all that to life under one brand built on the values we live and play by.

WE ARE SPEKTRUM!

SPEKTRUM

SKUTAN

This new kid on the block is the essence of what a goggle should be. Providing you with a magnificent visual field through the spherical high-grade polycarbonate lens this piece of eyewear also has a stunning visual appearance. To provide a great fit with or without a helmet we have equipped Skutan with a streamlined and pivoting strap outrigger that adjusts to your headwear of choice.

A brand new goggle developed together with ski racing legend Ingemar Stenmark. Ingemar is a fundamental part of Spektrum and together we have built a goggle that has his six decades of skiing expertise baked into it's very essence. Fusing his experience with our knowledge in product development and design it allows great peripheral vision, has a fantastic fit -especially with a helmet- and no unnecessary parts that can potentially cause trouble. A legendary goggle for legendary riders.

Built for the most demanding riders out there, Helags is designed and developed in our own backyard at Åreskutan. It's a magic union of style and function. The SnapSwitch function allows you to change your lens quick when the weather shifts and it will stay in place during powder wind mill tumbles. The cylindrical dual lens will keep your vision distortion free and fit your face and helmet like a perfect glove.

There are skiers, then there are Skiers. Then there's Ingemar Stenmark. The world's most legendary ski racer with an unsurpassed 86 World Cup victories. He spellbound nations during 15 years bringing the thrill of skiing into living rooms all over the world. Skiing in general and skiing in Sweden in particular would not be what it is today without him. Ingemar is a fundamental part of Spektrum and together we have developed a frame that has his six decades of skiing expertise baked into it's very essence. Great field of vision, fantastic fit and the race inspired coloring gives a nod to an era when the style of skiers was at it's peak.

CLEAN VISION!

A SHIFT FOR OUR FUTURE

The Duo-Tone Series marks a shift in Spektrums direction. To signal it we're stepping away from our signature monochrome colour palette. These two-colored frames and the way they are built is truly something very special.

Living our lives in the mountains we see the impact mankind has on our nature first hand and we are determined to minimize the footprint of our actions. That is the reason that we over the past two years have worked hard to achieve this shift in our production method. So coming generations will be able to enjoy their right of being outdoors in the mountains. We call it science for the wild!

For the **Duo-Tone** series we've worked closely together with Sweden's leading scientists at the **Sports Tech Research Center** at **Mid Sweden University** in **Östersund**. Researching new materials and ways to produce products in a more sustainable way.

Together we have strived to find the best possible substitute for the oil based polymers and materials found in traditional goggles.

Our research and development have been realized with our premium **Duo-Tone** series. Using new plant based polymers derived from castor and ricin oils as well as recycled polyester these products truly earns our future tag line: **CLEAN VISION.**

This is the first step on our sustainable journey forward and it truly marks a shift for our future.

SUSTAINABLE
CHOICE

HELAGS DUOTONE

This environmentally sustainable version of Helags is built for ourselves and the most demanding mountain riders out there. Taking a step on our path towards a more sustainable future the frame and plastic detailing are all derived from bio based polymers and the strap consists of recycled polyester.

BLACK LINE

During sun drenched glacier sessions your eyes need utter darkness. The Spektrum Black Line gives you just that- a polarized dark smoke tinted lens to shield you from hazardous radiation and ice-glare encased in an all-black frame with matching strap. Built without compromise for the glacier but equally functional during bright winter days when your eyes need extra protection. Built on our three favorite frames, you will surely find your new all-black companion in this line.

PHOTOCHROMIC

Our PHOTOCHROMIC Edition features an innovative lens technology that shifts its transparency with the outdoor light conditions ensuring your eyes always have optimal comfort. Both in low light conditions and bright sunny skies. The hi-tech lens along with a great fit and all the features you have come to expect from your SPEKTRUM goggles makes this the only pair you will want to use this season.

When it comes to having a connection with mother earth no one can quite measure up to our friend Evelina Nilsson. For this Jedi of freeskiing it's all about finding flow and absorbing positive energies. Being one of the world's most accomplished freeskiers that all pours down to an organic and flowing style that appeals to all of us watching and skiing with her as well as Freeride World Tour judges. Her design takes inspiration from hearts, positive energies and flowing mountain streams. Built in new sustainable bio-based materials this goggle makes sure she finds her path down the most challenging terrain

G006 JR

Made for slightly smaller faces, the G006 is built with modern style and durable quality. The frame fits nicely with most helmets on the market and the Tri-foam gives smaller faces a comfortable fit. A top quality dual lens makes sure your visual perception is undistorted at all times and the anti-fog treatment will stand the test of any hike.
