

R'ADYS
OUTDOOR ESSENTIALS

SWISS ENGINEERING BY R'ADYS WORKBOOK WINTER 2017/18

Dear specialist retailers

We look forward to a new sales season. For winter 2017/18 we have added new products and shades, which round out the collection. The reliable collection concept remains: compact, straightforward, and perfectly combinable. The fresh colours create an overall impressive attraction in your shop. Thanks to the EU warehouse in Lustenau, Austria we offer high availability even during the season. The R'SONIC bonding technology remains an important unique selling point for the complete PFC-free R'ADYS collection. These techniques ensure our fabrics are long-lasting, with minimal weight and modern seam construction.

We remain true to our motto to offer R'ADYS users the best possible comfort for outdoors. See for yourself!

Your R'ADYS & CATRADE Team

Smart concept

Compact, ingenious, combinable with everything, comprehensible and simple to use.

Bonding technology

The first outdoor collection almost completely and welded by lasers cut (= textile artworks)

Best fit

The advance cut ensures a perfect fit. Thanks to extra short and extra long leg lengths pants almost anyone/everyone can find the right size.

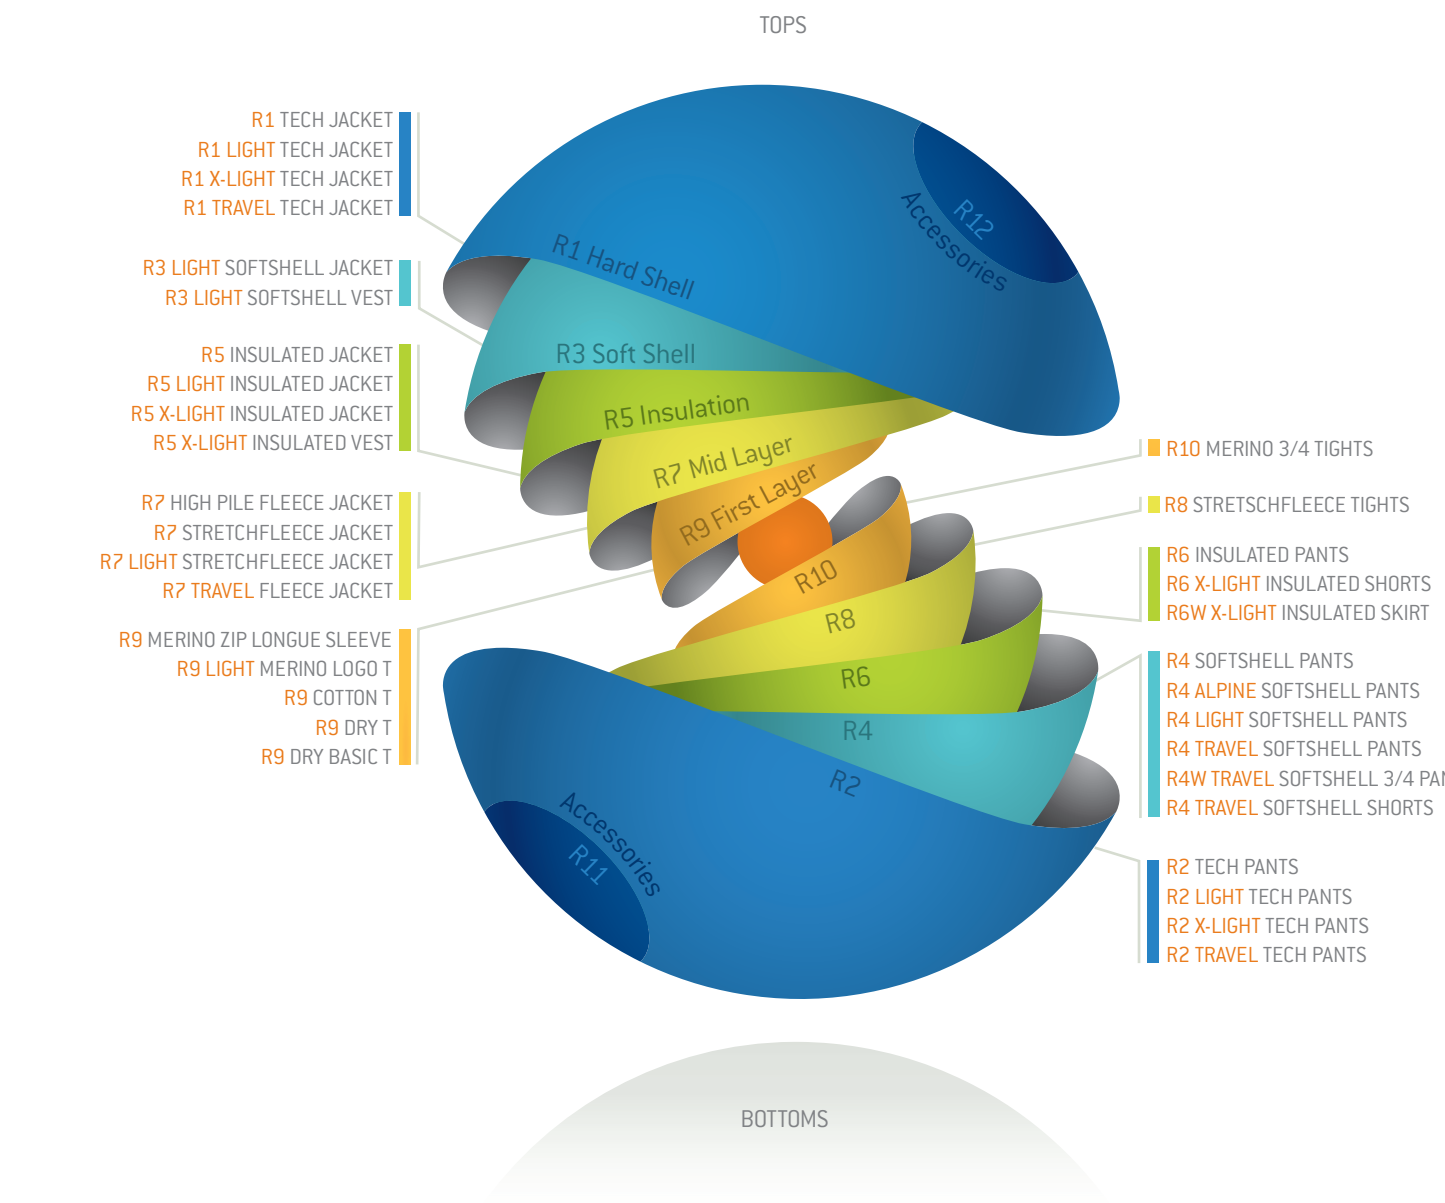

Pure comfort

Further success factors:

- Swiss brand located on the German/French language border in Nidau on Bielersee.
- Sales and logistic in Switzerland by Catrade AG in Büren LU.
- Rapid and competent response for orders.
- Distribution via specialist mountain and outdoor shops with great customer service.
- Online shop in cooperation with stationary retailer.
- About 50% of the styles are produced in Europe. A sustainable production line is for us a personally important issue.
- R'ADYS is the first brand to use only fluorocarbon free water repellent treatment !
- Nearly all of the fabrics we use are bluesign® certified. Our hollow-fiber R'Insulation padding is made of 100% recycled polyester.
- Our superfine merino styles are knitted and produced in Europe from South African and certified New Zealand merino wool.

R'ADYS LAYER CONCEPT

R'ADYS helps you find the best possible comfort. Thanks to the Concept Disk, we can comprehensively show what to wear or pack for specific temperatures and sports. This is made possible by optimally layering fabrics and functionalities, and thanks to a single upscale price point that does not compromise on quality.

Tops	Bottoms	Layer	Fabrics
R1	R2	Hard Shell	R'tech // R'tech light // R'tech x-light // R'tech Travel
R3	R4	Soft Shell	R'shell // R'shell light // R'shell x-light // R'shell travel
R5	R6	Insulation	R'Insulation stretch
R7	R8	Mid Layer	R'therm // R'therm high pile // R'therm light // R'therm travel
R9	R10	First Layer	R'dry // R'merino // R'merino light // R'cotton

R1/R2 HARDSHELLS // R'TECH // R'TECH LIGHT // R'TECH X-LIGHT // R'TECH TRAVEL

R'tech / R'tech light // A waterproof and windproof, highly breathable laminate for our weather-proof clothing. The stretchy polyamide upper surface has a robust, matt exterior and is pleasantly soft to touch. The PU membrane reliably protects against wind and weather with values of 20.000mm water column and 15.000g/m²/24h water vapour permeability.

R'tech x-light // A waterproof and windproof, highly breathable laminate for our ultra-light weather-proof clothing. The light mechanical stretch in the matt polyamide outer fabric follows every movement that you make. The PU membrane protects against the worst weather conditions, with values of 30.000mm water column and 38.000g/m²/24h water vapour permeability.

R'tech travel // Water- and windproof, very breathable 2.5L fabric with PU membrane for R'ADYS hardshells. The PU membrane reliably protects against wind and weather with a water column of 20 000mm and 20 000g/m²/24h water vapor permeability. The outer fabric is made of soft but durable polyamide. The mechanical stretch of the upper material allows an ample freedom of movement. The functional print on the fabric inside contains recycled coffee particles and can therefore eminently well absorb moisture and reduces odor.

R3/R4 SOFTSHELLS // R'SHELL // R'SHELL LIGHT // R'SHELL TRAVEL

R'shell // An elastic, wind- and water-repellent fabric in a double-weave fabric construction. The soft inner surface offers limited heat insulation. Good freedom of movement and climate comfort for active (winter) tourists!

R'shell light // A light, elastic, wind- and water-repellent double-weave fabric for the best climate comfort and freedom of movement, for active sportspeople and warmer conditions.

R'shell Travel // Ultra-light, stretchy double-weave fabric for R'ADYS Travel Soft Shells with the best freedom of movement. Thanks to the temperature- and moisture-regulating heIQ Adaptive, you'll feel great even in warmer weather.

R5/R6 INSULATION // R'INSULATION STRETCH

R'insulation // A hollow polyester fibre filling with an excellent warmth-to-weight ratio. The brand fibre ThermoCool by Advansa with its extra air pockets ensures special heat retention and increased breathability.

R'insulation stretch // A hollow fibre filling with an excellent warmth-to-weight ratio from Primaloft that is stretchable. The Primaloft fibre from Primaloft with its extra air pockets ensures special heat retention and increased breathability.

R7/R8 MID LAYER // R'THERM // R'THERM HIGH PILE // R'THERM LIGHT // R'THERM TRAVEL

R'therm // Our stretch-fleece quality keeps you really warm thanks to its cosy, soft inner surface. Its robust exterior can take a lot of wear and tear. Manufactured in Europe. The heat reservoir for active people!

R'therm high pile // A fluffy high pile fleece with an exceptional warmth-to-weight ratio. The high pile creates a larger insulating layer, keeping you warm even in very cold temperatures.

R'Therm Travel // soft, light and warm fleece fabric quality from Italy with a fresh stripe design. A perfect combination of high function and a modern look.

R'therm light // Light, stretch-fleece quality with a cellular structure. For an optimum warmth-to-weight and volume ratio! Tecno-Stretch by the Italian brand manufacturer Pontetorto.

R9/R10 FIRST LAYER // R'DRY // R'MERINO // R'MERINO LIGHT // R'COTTON

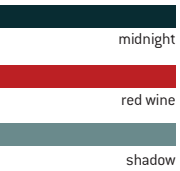

R'dry // An elastic, functional fabric, quick to dry, worn right against the skin. Thanks to its few skin contact points it gives a dry, highly pleasant feeling when worn. It's what helps you feel good in your body.

R'merino // Merino French Terry (190g/m²) in extra-fine quality: merino wool is distinguished by its especially good heat retention, even when wet, and by its resistance to odour formation. The loop structure on the interior of the fabric keeps the quality extra warm, and the reduced skin contact points mean the fabric doesn't stick to the skin. We use extra-fine fibres with a strength of 16.5 microns that are also suitable for sensitive skin. The wool comes from South Africa and so is mulesing-free, and it is processed in Europe.

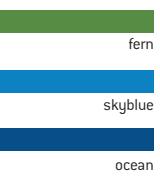

R'merino light // A light merino jersey fabric (140g/m²) in extra-fine quality: merino wool is distinguished by its especially good heat retention, even when wet, and by its resistance to odour formation. The loop structure on the interior of the fabric keeps the quality extra warm, and the reduced skin contact points mean the fabric doesn't stick to the skin. The wool comes from New Zealand and is certified mulesing free, and it is processed in Europe.

R'cotton // Courtesy of certified organic cotton fabric from turkish cultivation for a natural wearing comfort. The natural fiber is spun in Turkey and further processed in Europe for high-quality R'ADYS clothing.

R'SONIC
STITCHLESS TECHNOLOGY

CAD lasers and high-frequency technology are used to create waterproof, lightweight, soft, flat and elastic bonded seams. This process enhances the simple, clean look of the R'ADYS clothing. Laser-cut, bonded details such as flat belt loops contribute to this unique appearance.

- ✓ innovative

✓ soft

✓ flat

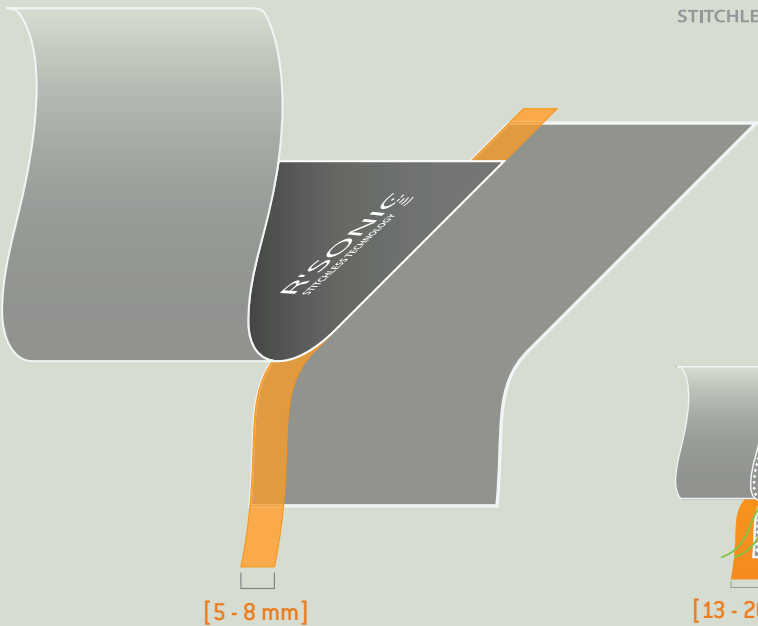

✓ flexible

✓ no wicking action
- ✓ lightweight

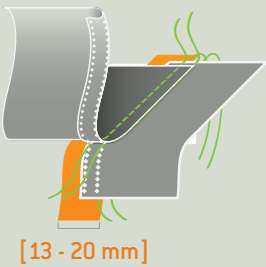

✓ laser-cut, sealed edges

high-performance

✓ fabric is not damaged by needle holes
